Third Drill Rig Arrives at Yamarna to Accelerate Exploration

Gold Road Resources ("Gold Road" or "the Company") (ASX: GOR) is pleased to advise that a third drill rig has arrived on site at its Yamarna Gold Belt to expedite the current exploration program at Hann, Central Bore, Justinian and Attila gold projects. The Yamarna Belt is located 140km east of Laverton on the eastern Goldfields of Western Australia.

The new RC drilling rig is capable of drilling to a depth of 800m and will be utilised initially at Central Bore and Justinian. The new rig will augment the RAB drilling program already underway at Central Bore and Justinian, where ~800m RAB drilling is currently completed per day. RC drilling at Hann is ongoing with ~150m completed per day

The Company owned auger rig is continuing shallow geochemical regional drilling at Yamarna to generate new gold targets.

Gold Road plans to drill approximately 90,000 metres throughout 2011, focussing primarily on Central Bore, Justinian, Hann and Attila as well as new gold targets.

Initial results from the current drilling program are expected to be announced in June.

About Gold Road Resources Limited

Gold Road Resources Limited (ASX: GOR) is a gold exploration company which owns tenements covering over 5,000 square kilometres of the Yamarna greenstone belt. The Yamarna Belt is located approximately 150km east of Laverton on the eastern edge of the Yilgarn Craton.

The Yamarna Belt, adjacent to the 500km long Yamarna shear zone, is a historically under-explored region that is highly prospective for gold mineralisation and hosts a number of significant new discoveries. It lies north of the recently discovered 5 million ounce Tropicana deposit owned jointly by AngloGold-Ashanti / Independence.

Gold Road is progressing two key gold trends, together with two recently discovered trends, on the Yamarna Belt:

- **Attila Trend**, which includes Attila, Alaric, Khan and Khan North Projects and extends for over 33 kilometres and hosts a significant JORC resource.
- **Central Bore Area** is a 6km² area east of the southern extent of the Attila Trend which has delivered five new discoveries in 15 months. Key projects in the Area include:
 - **Central Bore Project** - gold mineralisation over a strike length of 800 metres and from surface to a depth of 300 metres; assay results of up to 1,000g/t gold, remains open to the north, south and depth; hosts a significant JORC resource.
 - **Justinian Project** – 200 metres east of the Central Bore Project, 600 metres long, wider structure than Central Bore, with intercepts up to 7m @ 27g/t Au.
 - **Central Bore North** - 500 metres north of the Central Bore Project's high-grade Imperial Shoot.
 - **Byzantium Project** – 500 metres west of the Central Bore Project, 1km long, VMS style base metal prospect.
 - **Hann Project** – 2.4 kilometre west of the Central Bore Project, 4.3 kilometre long, three parallel gold anomalies.
- **Tobin Hill** – 5.5 kilometres southeast of the Central Bore, 1.5 kilometre gold anomaly.
- **Dorothy Hills** – 23 kilometres north-east of the Central Bore, two gold anomalies, 1.4 and 1.8 kilometre long.

NOTES:

The information in this report which relates to Exploration Results or Mineral Resources is based on information compiled by Ziggy Lubieniecki, the Technical Director of Gold Road Resources Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Ziggy Lubieniecki has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Ziggy Lubieniecki consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.
