HIGH GRADE GOLD ASSAYS CONTINUE AT CENTRAL BORE – 182g/t

Eleckra Mines Limited (“Eleckra” or “the Company”) (ASX: EKM) is pleased to announce more high grade gold intercepts at its Central Bore Trend within its wholly-owned Yamarna Gold Project, 140km east of Laverton, Western Australia.

On 25th October, Eleckra announced the highest gold intercepts recorded from its Central Bore Trend within its Yamarna Gold Project; **1 metre @ 845 g/t Au** within an intercept of **5 metres @ 146 g/t Au (average*)** from 226 metres, recorded from 10EYRC0103. The latest assay results returned assays up to **1 metre @ 182 g/t Au** within an intercept of **6 metres @ 35 g/t Au** from 10EYRC0106.

Highlights:

- **6 metres @ 35 g/t Au from 237 metres including 1 metre @ 182 g/t Au**
- **1 metres @ 19.14 g/t Au from 272 metres**
- **5 metres @ 4.07 g/t Au from 274 metres**
- **4 metres @ 2.75 g/t Au from 230 metres**
- **3 metres @ 3.5 g/t Au from 233 metres**

In the current program, the 3rd RC drilling program at Central Bore, Eleckra has completed 13 RC holes (10EYRC0094 to 10EYRC0106) for 3,257 metres at the Central Bore deposit.

The purpose of the current RC drilling program at Central Bore was to establish the orientation of the high-grade shoots with greater confidence.

Two pre-collar holes (10EYRC0094 and 10EYRC0095) are expected to be completed with diamond tail at the end of the program. The results from the holes 10EYRC0097 – 10EYRC0102 that were drilled in the southern part of the Central Bore, confirmed that there is no gentle plunge to the south.

Additionally, results from the holes 10EYRC096 and 10EYRC0103 – 10EYRC0106 that were drilled at the northern shoot “The Imperial Shoot” confirms a continued high grade, steep plunge. Further drilling at the Imperial Shoot has been recommenced.

The current RC drilling program will be finalised later this year. Eleckra aims to publish its maiden JORC resource in early 2011.

Chairman Mr Ian Murray commented “These continued high grade intercepts at Central Bore reinforce our belief that we are uncovering a potential new gold region in Australia. Further drilling of the numerous targets that we have around Central Bore will assist us in gaining a better understanding of the regional geology.”

* Average – means an average of repeats and duplicates. See table below.

About Eleckra Mines Limited

Eleckra Mines Limited (ASX: EKM) is a gold exploration company which owns tenements covering over 4,000 square kilometres of the Yamarna greenstone belt. The Yamarna belt, adjacent to the 500 kilometre long Yamarna shear zone, is a historically under-explored region that is highly prospective for gold mineralisation and hosts a number of significant new discoveries. It lies north of the recently discovered 6 million ounce Tropicana deposit owned by AngloGold-Ashanti / Independence.

Eleckra is focussing on progressing its two key project areas within the greater Yamarna Project:

- The **Attila Trend, (Barbarian Trend)**, which includes Attila, Alaric and Khan deposits and extends for over 33 kilometres and hosts a significant JORC resource.
- The **Central Bore Trend (Imperial Trend)** is a 6 km² area east of the southern extent of the Barbarian Trend which has delivered four new discoveries in 15 months:
 - **Central Bore** - gold mineralisation over a strike length of 800 metres and from surface to a depth of 300 metres, with assay results of up to 845g/t gold. It remains open to the north, south and depth.
 - **Justinian** – 200 metres east of Central Bore, 600 metres long, wider structure than Central Bore.
 - **Byzantium** – 500 metres west of Central Bore, 1km long, VMS style base metal prospect.
 - **Hann** – 2.4km west of Central Bore, 4.3km long, three parallel gold anomalies.

NOTES:

The information in this report which relates to Exploration Results, or Mineral Resources is based on information compiled by Ziggy Lubieniecki, the General Manager of Eleckra Mines Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Ziggy Lubieniecki has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Ziggy Lubieniecki consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.
