Dear Sir / Madam

**2<sup>nd</sup> Batch of Assays Enhance High Grade Gold Discovery at Central Bore  
559 g/t Au from Surface Rock Sampling  
Drilling program expanded to 10,000 metres**

Eleckra Mines Limited ("Eleckra") (ASX: EKM) is pleased to announce continued high grade results from **Central Bore** which support the first batch of assays from its current RC drilling program at its 100% - owned Yamarna Gold Project. The Yamarna Project is located approximately 150km east of Laverton on the eastern edge of the Yilgarn Craton and within the Yamarna Greenstone Belt.

In the current phase of RC drilling at **Central Bore**, Eleckra has completed eighteen holes for 3,594 metres. Assay results from the second lot of nine RC holes have been received returning exciting elevated gold values of up to **40g/t Au** over a one metre interval.

Significant results include:

- **1 metre at 40.27 g/t Au from 188 metres**
- **1 metres at 27.93 g/t Au from 125 metres**
- **2 metres at 14.01 g/t Au from 178 metres including 1 metre at 17.84 g/t Au**
- **3 metres at 6.14 g/t Au from 224 metres**

The mineralisation is generally associated with presence of elevated molybdenum, carbonate veining/alteration and minor sulphides.

Detailed surface channel sampling at Central Bore above the main (northern) shoot returned values of up to **559 g/t Au and 88 g/t Au** across 0.5 metre widths indicating the high grade mineralisation at Central Bore extends right to surface.

Due to the exploration results to date from this drilling program Eleckra has increased the program from 7,000 metres to 10,000 metres across Central Bore, Byzantium and Hann prospects.

The Central Bore prospect is located only 3.7 kilometres east of the Attila gold deposit at the southern end of the Yamarna gold deposit(s), which have combined Measured, Indicated and Inferred Mineral Resources of 19.8Mt at 1.44 g/t Au for 917,000 ounces of contained gold using a 0.5 g/t cut-off.

Eleckra has just completed a reconnaissance drilling program at the **Byzantium** prospect, which consisted of 6 holes for a total of 470 metres, and has started the systematic drilling at the highly prospective Hann prospect with 19 holes totalling 1,100 metres already completed.

The next batch of assays, including the remaining 4 holes and the remaining intercepts from holes 10EYRC0001 and 10EYRC0008 from Central Bore, 6 holes from Byzantium, and 19 holes from Hann is expected in mid June.
