

## Gold Road Completes Infill Diamond Drilling at Central Bore and Commences Extensional Drilling

Gold Road Resources Limited (**Gold Road** or the **Company**) (ASX: GOR) is pleased to announce the remainder of the results from the recently completed diamond drilling program at its **Central Bore Project** located on its wholly-owned ~5,000km<sup>2</sup> Yamarna Belt in Western Australia have been received.

The 30 hole diamond drilling program which tested the Imperial Shoot to a depth of 250 metres confirmed the overall shape of Central Bore's high-grade Imperial Shoot and defined its boundaries with greater confidence. Nineteen of the holes were extended to provide drill core to be used for geotechnical studies.

### Diamond drilling highlights:

- **3 metres @ 72.76 g/t Au** from 55.0 metres including **0.3 metres @ 712 g/t Au**
- **1.2 metres @ 31.47 g/t Au** from 53.2 metres including **0.2 metres @ 144 g/t Au**
- **0.4 metres @ 50.91 g/t Au** from 192.8 metres
- **0.6 metres @ 27.54 g/t Au** from 228.3 metres

*(Notes: 1.0 g/t Au cut-off, the true widths are approximately 50% of the down-hole widths.)*

The Imperial Shoot lode was visibly detected in all of the diamond cores, which bodes well from the grade control perspective. The vertical continuity of the mineralisation is excellent and open at depth.

The full set of assay results from the program is listed in Appendix 1.

Comparisons of the gold intercepts on a gram x metre basis between the twin diamond and RC holes show good consistency in the upper part of the Imperial Shoot with more variability in the lower part of the shoot.

The results of the program will now be incorporated into the deposit resource model and the more detailed mining studies currently underway.

A new deeper diamond drilling program designed to increase the underground resources and mine life has commenced at Central Bore to test the Imperial Shoot between 250 metres and 450 metres below surface with the first hole being completed. The lode zone was successfully intercepted at a depth of approximately 491 metres down hole and approximately 25 to 30 metres vertically below 11CRBC007 (1 metre @ 480 g/t Au). The core samples have been delivered to Genalysis in Kalgoorlie and results are expected shortly.

## About Gold Road Resources Limited

Gold Road Resources Limited is a gold exploration company which owns tenements covering over 5,000 square kilometres of the Yamarna greenstone belt. The Yamarna Belt is located approximately 150km east of Laverton on the eastern edge of the Yilgarn Craton in Western Australia.

In recognition of the success of the exploration programs at the Yamarna Belt, Gold Road is the winner of the Emerging Company 2011 award (Diggers & Dealers Conference), the Excellence in Exploration & Discovery 2011 award (Mines & Money Australia) and both the Resource Stocks Explorer of the Year and People's Choice awards.

The Yamarna Belt, adjacent to the 500 kilometre long Yamarna shear zone, is a historically under-explored region that is highly prospective for gold mineralisation and hosts a number of significant new discoveries. It lies north of the recently discovered 5 million ounce Tropicana deposit owned jointly by AngloGold-Ashanti / Independence.

Gold Road is progressing two key gold trends, together with two recently discovered trends, on the Yamarna Belt:

- **Attila Trend**, which includes Attila, Alaric, Khan and Khan North Projects and extends for over 33 kilometres and hosts a significant JORC resource.
- **Central Bore Area** is a 6km<sup>2</sup> area east of the southern extent of the Attila Trend which has delivered five new discoveries in 24 months. Key projects in the area include:
  - **Central Bore Project** - gold mineralisation over a strike length of 800 metres and from surface to a depth of 440 metres; assay results of up to 1,000 g/t Au, remains open to the north, south and depth; hosts a significant JORC resource.
  - **Justinian Project** – 200 metres east of the Central Bore Project, 600 metres long, wider structure than Central Bore, with intercepts up to 7m @ 27 g/t Au.
  - **Central Bore North** - 500 metres north of the Central Bore Project's high-grade Imperial Shoot.
  - **Central Bore South** – 500 metre long mineralised structure south of the cross cutting Lubieniecki dyke.
  - **Byzantium Project** – 500 metres west of the Central Bore Project, 1 kilometre long, VMS style base metal prospect.
- **Tobin Hill** – 5.5 kilometres south-east of the Central Bore Project, 1.5 kilometre gold anomaly.
- **Dorothy Hills** – 23 kilometres north-east of the Central Bore Project, two gold anomalies, 1.4 and 1.8 kilometres long.

### NOTES:

The information in this report which relates to Exploration Results or Mineral Resources is based on information compiled by Ziggy Lubieniecki, the Technical Director of Gold Road Resources Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Mr Lubieniecki has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Lubieniecki consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

## Appendix 1
