

ASX ANNOUNCEMENT

5 April 2011

New Gold Anomalies Identified at Dorothy Hills Drilling Recommended at Hann

Dorothy Hills

Gold Road Resources Limited ("Gold Road" or "the Company") (ASX: GOR) has identified significant **new gold anomalies** at its **Dorothy Hills Prospect, located approximately 23 kilometres north-east of the Central Bore Gold Deposit** (Figure 1) on its 100%-owned Yamarna Gold Belt in the eastern Goldfields of Western Australia.

Analysis of the airborne magnetics and recent geological mapping indicates favourable structures at the granite and basalt contact where the basalt is folded and wrapped around intruded granite. Gold anomalism is also expected within the folded sheared granite.

Combined auger and soil geochemistry programs over two areas at Dorothy Hills have defined significant gold anomalies (Figure 2). The north-western area identified a **1.8 kilometre-long anomaly** and the south-eastern area identified a **1.4 kilometre-long anomaly**. Both anomalies are open-ended. The weaker responses coincided with thicker transported cover. Four **rock chips** collected from the quartz vein sub-outcropping in the north-western area returned values **between 0.081 g/t Au and 0.699 g/t Au** (Figure 2).

It is believed that a significant extent of the untested 15 kilometre-long granite-basalt contact could potentially be mineralised. The follow up geochemical and drilling work will be carry out later this year to gain a better understanding of the Dorothy Hills prospect's gold potential.

Expanded Exploration Team & Drilling Re-Commences

Gold Road has more than doubled its exploration team to allow the Company to fast-track its exploration of the Yamarna Belt by running multiple exploration programs.

The Company has appointed three field geologists, two field assistants and a GIS/Database geologist, increasing the exploration team to ten employees. Further recruitment will continue.

Ground conditions have improved after the recent heavy rains, allowing Gold Road to re-commence RC drilling at the Hann Prospect where approximately 10,000 metres of RC drilling will be undertaken to test the 4.3 kilometre-long gold anomaly.

One RAB drilling rig and a second RC drilling rig (capable of drilling to a depth of 600 metres) are expected on site within 3-4 weeks to start drilling programs around the Central Bore and the Justinian area.

The Company owned auger rig has commenced shallow geochemical regional drilling at Yamarna to generate new gold targets.

About Gold Road Resources Limited

Gold Road Resources Limited (ASX: GOR) (formerly known as Eleckra Mines Limited) is a gold exploration company which owns tenements covering over 5,000 square kilometres of the Yamarna greenstone belt. **The Yamarna Belt** is located approximately 150km east of Laverton on the eastern edge of the Yilgarn Craton and within the Yamarna Greenstone Belt.

The Yamarna Belt, adjacent to the 500km long Yamarna shear zone, is a historically under-explored region that is highly prospective for gold mineralisation and hosts a number of significant new discoveries. It lies north of the recently discovered 5 million ounce Tropicana deposit owned jointly by AngloGold-Ashanti / Independence.

The current measured, indicated and inferred JORC resource inventory for the Yamarna Belt (encompassing the Attila and Central Bore Projects only) now exceeds 1 million ounces of gold (Appendix 1).

Gold Road is focused on progressing its two key project areas within the greater Yamarna Project:

- **The Attila Trend**, which includes **Attila, Alaric, Khan and Khan North Projects** and extends for over 33 kilometres and hosts a significant **JORC resource**.
- **The Central Bore Trend** is a 6km² area east of the southern extent of the Attila Trend which has delivered five new discoveries in 15 months:
 - **Central Bore Project** - gold mineralisation over a strike length of 800 metres and from surface to a depth of 300 metres, with assay results of up to **1,000g/t gold**. It remains open to the north, south and depth. It hosts a significant high-grade **JORC resource**.
 - **Justinian Project** – 200 metres east of the Central Bore Project, 600 metres long, wider structure than Central Bore, with intercepts up to 7m @ 27g/t Au.
 - **Byzantium Project** – 500 metres west of the Central Bore Project, 1km long, VMS style base metal prospect.
 - **Hann Project** – 2.4km west of the Central Bore Project, 4.3km long, three parallel gold anomalies.
 - **Central Bore North** - gold trend located 500 metres north of Central Bore Project

NOTES:

The information in this report which relates to Exploration Results or Mineral Resources is based on information compiled by Ziggy Lubieniecki, the Technical Director of Gold Road Resources Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Ziggy Lubieniecki has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Ziggy Lubieniecki consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

APPENDIX 1:

The Mineral Resource inventory for the Total Yamarna Project including Attila and Central Bore Projects as at March 2011. (Note: rounding errors may occur.)

2011 Attila/Central Bore Tonnes and Grade by Resource Classification - Yamarna Project

Deposit	Inferred			Indicated			Measured			Total		
	Tonnes	Au (g/t)	Au (oz)	Tonnes	Au (g/t)	Au (oz)	Tonnes	Au (g/t)	Au (oz)	Tonnes	Au (g/t)	Au (oz)
Attila (0.5g/t Au Cut-off)	7,117,000	1.41	322,000	6,251,000	1.36	273,000	6,449,000	1.55	322,000	19,817,000	1.44	917,000
Central Bore (1.0g/t Au Cut-off)	238,000	4.78	36,600	333,000	9.43	101,000	24,000	16.67	12,700	595,000	7.86	150,300
Total	7,355,000	1.52	358,600	6,584,000	1.77	374,000	6,473,000	1.61	334,700	20,412,000	1.63	1,067,300
