- All Mineral Resources are completed in accordance with the JORC Code 2012 Edition. All figures are rounded to reflect appropriate levels of confidence. Apparent differences may occur due to rounding. Mineral Resources are inclusive of Ore Reserves and depleted for mining. Gruyere Measured category includes Surface Stockpiles (2.91 Mt at 0.87 g/t Au for 0.08 Moz)
- All Mineral Resources are constrained by optimised shapes to determine the portion of the total mineralised inventory within the resource model that has a reasonable prospect of eventual economic extraction. Open pits have no allowance for ramps, dilution or mining recovery. Undergrounds include a minimum mining width and are reported as diluted tonnage and grade with no allowance for pillars or mining recovery. Cut-off grades allow for mining, haulage and processing costs and metallurgical recovery based on operational, FS, PFS and/or benchmark study data
- Underground Mineral Resources are reported with diluted tonnages and grades based on minimum stope widths.

Ore Reserve Notes:

- OP = Open Pit and UG = Underground
- All Ore Reserves are completed in accordance with the 2012 JORC Code Edition. All figures are rounded to reflect appropriate levels of confidence. Apparent differences may occur due to rounding. Ore Reserves are depleted for mining. Gruyere Proved category includes Surface Stockpiles (2.91 Mt at 0.87 g/t Au for 0.08 Moz)
- Ore Reserves are reported above cut-off grades and constrained within detailed mine designs derived from mining (including dilution and mining recovery), haulage and processing costs and metallurgical recovery and geotechnical parameters as defined by operational, FS and/or PFS study data.
